## Bennet, Udall announce Colorado counties eligible for drought assistance

US Senate 7/3—Colorado U.S. Senators Michael Bennet and Mark Udall today announced that the U.S. Department of Agriculture (USDA) has designated 62 of Colorado's 64 counties as primary natural disaster areas due to losses caused by drought, excessive heat, and high winds since the beginning of the year. The other two counties have been named contiguous disaster areas.

"The entire state of Colorado has been severely affected by hot and dry conditions that have hampered the production of our agricultural producers," Bennet said. "The designations from USDA will provide much-needed assistance to farmers to help offset their losses due to drought. Agriculture is a critical part of Colorado's economy, and these resources will help producers weather a difficult growing season."

"I am pleased that U.S. Department of Agriculture Secretary, Tom Vilsack, has granted Governor Hickenlooper's request to designate eligible counties in Colorado as disaster areas in response to severe drought condi-

tions across our state," Udall said. "The losses that face Colorado's agriculture producers are mounting and now that this declaration has been made, Colorado's farmers and ranchers will have access to additional resources to get them through these tough times."

Bennet and Udall wrote a letter to Agriculture Secretary Tom Vilsack last month asking for federal assistance for Colorado farmers and ranchers, who are facing severe drought conditions that are threatening crops, livestock and rural livelihoods. The senators voiced concerns they have heard from Colorado agricultural producers who are facing severe financial and operational losses.

Producers in counties designated as primary or contiguous disaster areas are eligible to be considered for Farm Service Agency (FSA) emergency loans. Farmers in eligible counties have eight months from the date of the disaster declaration to apply for assistance. Local FSA offices can provide farmers and ranchers with additional information.

## Regional Corporate Filings

New Corporations, Other New Limited Liability Organizations, and Their New Trade/Service Marks, as Reported by the Office of the Colorado Secretary of State

Answers to Questions  
provided by  
**E-The Environmental  
Magazine**

**DEAR EARTHTALK:** Is there any environmental risk from all that Japanese tsunami debris that is starting to wash up on the U.S. west coast?

—Bailey Thigerson, Seattle, WA

THE JAPANESE government estimates that some 1.5 million tons of debris is afloat in the Pacific Ocean as a result of the March 2011 earthquake, tsunami and nuclear disaster. No one knows exactly how much of this debris will wash up on American shores or end up absorbed by the water column or trapped in mid-ocean gyres, but state coastal authorities from California to Alaska are readying response plans.

One certain threat is invasive species. Scientists from Oregon State University's Hatfield Marine Science Center confirmed the presence of dozens of species native to Japanese coastal waters — including barnacles, starfish, urchins, anemones, amphipods, worms, mussels, limpets, snails, solitary tunicates and algae—that were on a large floating dock in Japan that washed ashore at Agate Beach near Newport, Oregon in June 2012. According to researchers, the 66 foot long dock contained some 13 pounds of organisms per square foot, and an estimated 100 tons of living matter overall. While there is no evidence to date that anything from the float has established on U.S. shores, researchers fearing the worst but hoping for the best are continuing to monitor the situation.

Of course, what worries researchers more is that the dock may just be the tip of the iceberg, so to speak, in regard to what else might wash ashore. "I think that the dock is a forerunner of all the heavier stuff that's coming later, and amongst that heavier stuff are going to be a lot of drums full of chemicals that we won't be able to identify," says Chris Pallister, president of the non-profit Gulf of Alaska Keeper, a group dedicated to cleaning marine debris from Alaska's coastline. He worries that the onslaught of debris will be "far worse than any oil spill ... or any other environmental disaster we've faced on the West Coast" as a result of the sheer amount and variety of debris and the wide geographic scope it is likely to affect.

Officials at the U.S. National Oceanic and Atmospheric Administration (NOAA) believe the Japanese tsunami debris has already spread over an area of the Pacific Ocean roughly three times the size of the contiguous United States. While some of the debris has already made landfall in the U.S., the bulk of it will take several more months to make it across the Pacific. Seattle-based oceanographer Curtis Ebbesmeyer, who has been tracking huge gyres of trash in the ocean for two decades and runs the Beachcombers' Alert website, thinks the majority of tsunami debris will reach U.S. shores as early as October 2012.

ANOTHER concern: Researchers were "startled" to find detectable levels of radioactivity from the Fukushima nuclear disaster in bluefin tuna, a favorite sushi fish, off the coast of California. While the levels of radioactive cesium were some 10 times higher than the amount measured in tuna off California in previous years, it is still below safe-to-eat limits in both Japan and the U.S. The researchers are continuing to study more bluefin tissue samples to see if elevated radiation levels persist, and are also looking into radiation levels in other long distance migratory species including sea turtles, sharks and seabirds.

**DEAR EARTHTALK:** I recently saw an article extolling the virtues of natural gas as an abundant, inexpensive and domestically produced automotive fuel. Is this going to be the automotive fuel of the future and how green is it?—Jason Kincaide, New Bedford, MA

IT IS DIFFICULT to say which of the growing number of fuel options will power the cars of the future. But natural gas, given its domestic abundance, low price and lesser carbon footprint, is certainly a contender, at least as far as researchers at the federally funded Argonne National Laboratory are concerned. Some of the same engineers there who developed the batteries now used in electric cars have been tasked with improving natural gas powered engine technologies, thanks to anticipated consumer demand for vehicles powered by something cheaper and greener than gasoline but without the hassles of other alternative fuels.

"Our conclusion is that natural gas as a transportation fuel has both adequate abundance and cost advantages that make a strong case to focus interest in the technology as a real game changer in U.S. energy security," Mike Duoba, an engineer at Argonne's Transportation Technology Research and Development Center outside of Chicago, told the *Talking Points Memo* news blog. "In terms of consumer ownership and use costs, the case to make a switch from current fuels to com-

pressed natural gas (CNG) is much more compelling than for other alternative fuels like ethanol and electricity."

Given this promise—in addition to a February 2012 Department of Energy announcement of a \$30 million competition aimed at finding ways "to harness our abundant supplies of domestic natural gas for vehicles"—Duoba and his colleague have been ramping up vehicle systems analysis and engine research and testing around CNG as a way to wean ourselves off of foreign fuel sources.

Their goal is to improve the efficiency of the CNG combustion process so that it can fit into a new line of engines that can run on gasoline or CNG equally as well, giving consumers the flexibility of choice without any trade-offs. Duoba thinks such a vehicle would have significant consumer appeal, especially in light of sluggish sales of the latest round of electric vehicles from the major automakers.

"At least for some time, compared to plug-in vehicle batteries, CNG storage offers lower weight, higher energy storage and lower costs—as well as faster refueling/recharging." And while CNG vehicles would generate emissions from their tailpipes, the Argonne team believes that their overall emis-

sions footprint would be smaller than that of an electric vehicle drawing power from the fossil-fuel-based electric grid.

But to Duoba the appeal of CNG is more about reducing America's dependence on foreign oil sources than on saving the planet. "Various technologies have been successful at reducing the environmental impact (criteria pollution) over the decades," Duoba wrote. "To the extent that consumption of foreign petroleum has not been reduced to acceptable levels, this could be viewed as the principal motivation."

But CNG faces the same major hurdle to becoming widely accepted as any other challenger to gasoline as king of the road: a lack of refueling stations. Whatever does finally unseat gasoline will no doubt have to have a system for refueling that rivals the convenience we've come to expect from our corner gas stations.

## Colorado Parks, Wildlife monitoring water temps in upper Arkansas—

*Continued from page 11*

gist Greg Policky, his concern from a fishery standpoint is that the water temps are increasing. So far, water temperatures have not reached the same point as 2002. "In that year, we saw water temperatures at Parkdale rise to nearly 80 degrees," said Policky.

Since mid-June, temperatures on the Arkansas have been moderate, with a 72-degree reading at Lone Pine on June 26.

Anglers on the Arkansas are encouraged to continue fishing, but asked to be careful with the release of their catch. Overplaying fish, and less than deli-

cate release of fish, could be lead to injury - particularly as water temperatures warm.

The amount of rain and the air temperatures in July and August will determine how warm the water may get.

"If there is fish mortality, it happens for a variety of reasons, so seeing a few dead fish on the side of the river is not cause for alarm yet," said Policky. He added that there are about 4,000 to 4,500 fish for every mile of river, so what anglers do not see is the huge number of live fish beneath the surface.

Colorado Parks and Wildlife has issued fishing advisories and asked for voluntary compliance with fishing restrictions on the Yampa and the White Rivers in western Colorado and is considering other requests for voluntary restrictions in other parts of the state, but no restrictions are currently being considered for the Upper Arkansas. If daily monitoring shows the need for restrictions, public notification will occur.

Colorado Parks and Wildlife manages 42 state parks, all of Colorado's wildlife, more than 300 state wildlife areas and a host of recreational programs. •

## PERSPECTIVE by Tribune Editor Jon Heaton

### Barbarians at the gate...

The word is out that Supreme Court Chief Justice John Roberts infuriated the three Radical Conservatives on his court when he leaned left for his decision on the Affordable Care Act, released last Thursday. Reflected in Antonin Scalia's minority opinion bemoaning Roberts' supposed knife to the heart of state's rights *ala the Confederacy*, all three—Scalia, Clarence Thomas, and Samuel Alito—have virtually excommunicated the Chief Justice from their cozy alliance.

We wonder if Roberts will so suffer from this chill that he might be induced to seek the approval of the Conspirators in the next term by overcompensating to the Radical Right. Then, the Court would be poised, with the critical assistance of Anthony Kennedy, to sanctify Corporatism and emasculate individual citizens by declaring unconstitutional the last remnants of both the New Deal and the Sherman Antitrust Act.

We have watched the super-corporations employ modern digital and communications technology to wrap their tentacles ever tighter around all Earth's people and resources.

Like our atmosphere, they are a presence so universal and ubiquitous that all nations—even the United States of America and its Congress—are overwhelmed by their fluidity, as they ooze their assets and processes wherever a nation's policies and resources serve them best.

Symbolic of this is the way the U.S. megabanks conduct their trade in futures instruments ("derivatives") all over the globe from bases in London, where the regulatory and taxing structure has been the most congenial.

Confronted with this phenomenon, disparate nation states are helpless to tax or regulate the mega-corporations effectively, so they are free to roam and plunder at will while mere geographically-defined political subdivisions fuss and flail.

Our Supreme Court justices of the radical right granted special speech rights to the megacorporations a couple of years ago, equating dollars with votes and thus invalidating the sacred right of each person to one vote.

### Happily ever after...?

If Barack Obama is not the person taking the oath of office next January 20th, Willard Romney will be. And as soon as there is a vacancy on the high Court, Willard will not hesitate to name another radical corporatist. From that moment on, corporate autocracy will rule where there was once enlightenment.

If Obama is re-elected, and if citizens press him hard, that next Supreme Court opening will be filled by a non-corporatist. After that, with a little more luck than we probably deserve, we might get back to one person, one vote. And with corporatist thuggery then under adult supervision, surely even the Republican Party could return to rationality. *jfh*
